Label Smarts: The Nutritional Goods on Grocery Shopping

Making a meal from fresh unprocessed foods is the best thing you can do for your diet, but sometimes finding time to cook can be a challenge. If pre-made products are the only option, you can still stack your cart with healthier selections by getting smart about the products you choose. The tips below can help you decipher label lingo and ensure you get the best nutritional value from your purchase.

If pre-made products are the only option, you can still stack your cart with healthier selections by getting smart about the products you choose

Get the low-down on “low.”

Controlled calorie, fat and sodium intake is an important part of maintaining a healthy diet. But how low is *low*? Food marked *Low Fat* contains three grams of fat or less per serving. Foods labeled *reduced fat* are at least 25 percent lower in fat or calories when compared to a similar product. In some rare cases *Light* can even refer to the lighter color of the product, not its reduced calorie or fat content.

Watch portion size.

The crackers you love claim to have only six grams of fat per serving, but keep your eye on the portion size. If two crackers are considered one serving and you normally wolf down five at a time, it might not be such a smart snack. You can avoid overeating by taking out individual servings and packaging them separately instead of munching straight from the box..

Know your fats.

All fats are not created equal. Unsaturated or ‘good’ fats—such as olive, sunflower, corn and soy oils—are much healthier and can actually reduce your blood cholesterol levels. Because of their high calorie and fat content, though they should still be eaten in moderation.

Steer clear of artery-clogging saturated fats.

Hydrogenated or partially hydrogenated vegetable oil listed on a label indicates saturated or trans fats and is a reason to put the product back on the shelf. Avoiding these ‘bad’ fats not only lowers your risk of heart disease but also helps to maintain a healthy body weight.

Fiber it up!

Eating a high fiber diet lowers your risk of heart disease, obesity and bowel-related problems, including constipation and colon cancer. Look for foods with high fiber content or marked as a “source” of fiber, which means two grams or more per serving. Stay away from white breads and choose products with whole grains to boost your fiber intake.

Beware of processed baked goods in whole grain clothing. Items labeled *multi-grain*, for example, are often loaded with white flour. Look for items labeled *100 per cent whole grain* for maximum fiber and health benefits.

Down with added sugars.

Naturally occurring sugars, such as those found in milk, fruits and vegetables, provide energy for your brain and muscles and are generally loaded with nutritious vitamins and minerals. Added sugars, on the other hand, are considered ‘empty calories’ because they’re generally found in foods with little nutritional value such as candy or soft drinks. Keep your waistline trim and your blood sugar stable by passing on items with refined sugars such as fructose, dextrose, corn syrup and brown sugar. The World Health Organization suggests no more than 12 teaspoons or 48 grams of refined sugar per day. Artificial sweeteners should also be avoided as they’ve been shown to increase cravings for sweet food.

Of course the easiest way to know exactly what goes into your body is to make it from scratch yourself.

Slow down on sodium.

Pre-packaged foods, and even healthier ‘low-fat’ options, are typically loaded with salt, which can raise your blood pressure and weight and can cause bloating. Switch to lower-sodium options of canned soups, broths, soy sauce and bouillon cubes, and try to limit your intake to 2300 milligrams of sodium a day.

Of course the easiest way to know exactly what goes into your body is to make it from scratch yourself. But when modern-day reality gets in the way and you’ve got to grab faster options, a little label logic can go a long way in helping you stay smart about the foods you choose.
